Hein Thant

FULL-STACK & DEVOPS ENGINEER

Bangkok time (UTC+7) · hello@example.com · [MOCK] github.com/handle · [MOCK] linkedin.com/in/handle

SUMMARY

Full-stack engineer who likes the hard parts: data models that stay correct, permissions that stay tight, apps that keep working offline, and services that stay fast under load.

I ship end to end, from Postgres and APIs to React and React Native, to the containers, clusters and CI pipelines they run on.

EXPERIENCE

Full-Stack Engineer · [MOCK] Company — [MOCK] 2024-Present

- Built typed, well-tested APIs with clear contracts using NestJS and Go.
- Delivered fast, accessible interfaces that feel finished in React and Next.js.
- Engineered schemas and migrations in Postgres that are safe to evolve under continuous deployment.

Full-Stack Engineer · [MOCK] Company — [MOCK] 2022-2024

- Developed mobile applications using React Native designed to keep working without a network.
- Implemented permission models and role-based access controls that are hard to get wrong.
- Configured containerized deployments and automated GitHub Actions pipelines for reliable shipping.

Platform & DevOps Engineer · [MOCK] Company — [MOCK] 2020-2022

- Managed Docker and Kubernetes workloads with infrastructure as code across cloud environments.
- Established observability pipelines with Prometheus and structured logging to find real system limits.
- Conducted load testing with k6 and Locust to stress-test APIs and optimize caching strategies.

CAPABILITIES

Front end
Fast, accessible interfaces that feel finished
`React · Next.js · TypeScript · Tailwind`

Mobile & offline
Apps that keep working without a network
`React Native · offline-first sync`

Back-end & APIs
Typed, well-tested APIs with clear contracts
`Node.js · NestJS · Go · REST · GraphQL`

Data
Schemas and migrations that are safe to evolve
`Postgres · Drizzle · Prisma · Redis`

Security & access
Permission models that are hard to get wrong
`Auth · RBAC · scoped queries`

DevOps & cloud
Shipping and running services reliably
`Docker · Kubernetes · Azure · DigitalOcean · IaC · GitHub Actions`

Observability & performance
Finding the real limit, then raising it
`Prometheus · logging · k6 · Locust · caching`

STACK LAYERS

INTERFACE	React · Next.js · React Native · TypeScript · Tailwind
API	NestJS · Go · Node.js · REST · GraphQL
DATA	Postgres · Redis · Drizzle · Prisma
INFRASTRUCTURE	Docker · Kubernetes · GitHub Actions · Terraform · Azure · DigitalOcean
TOOLS	Prometheus · k6 · Locust · Biome · Playwright
